UI & BRAND

FINEPACK BRANDING

Finepack is a global packaging company that works with European brands of all sizes across various sectors, including fashion, cosmetics and jewelry. The main goal of this company-wide rebrand was to shift Finepack towards a more upscale market. It aims to show how a single, simple product can tell many different stories and represent various personalities.

PROBLEM

Finepack's brand read as generic and mid-market – too rigid to credibly serve the premium clients it wanted to win.

DECISION

Simplify both logo and wider branding towards a more adaptable, geometric solution paired with carefully selected photography to evoke the desired luxury feel.

OUTCOME

A subtle, versatile identity that works as well on a bakery bag as an engagement-ring box, elevating the brand while leaving room for endless personalisation.

WRIKE ICONOGRAPHY

The icon redesign was a self-directed brand initiative at Wrike, part of a broader push to make the design system feel more cohesive and up-to-date. In the past three years, Wrike's identity changed from a filled, illustrative style with a wide color range to a much simpler one featuring minimal geometric shapes and lines. The legacy icon set was a leftover from that older system, and no longer matched where the brand had moved.

PROBLEM

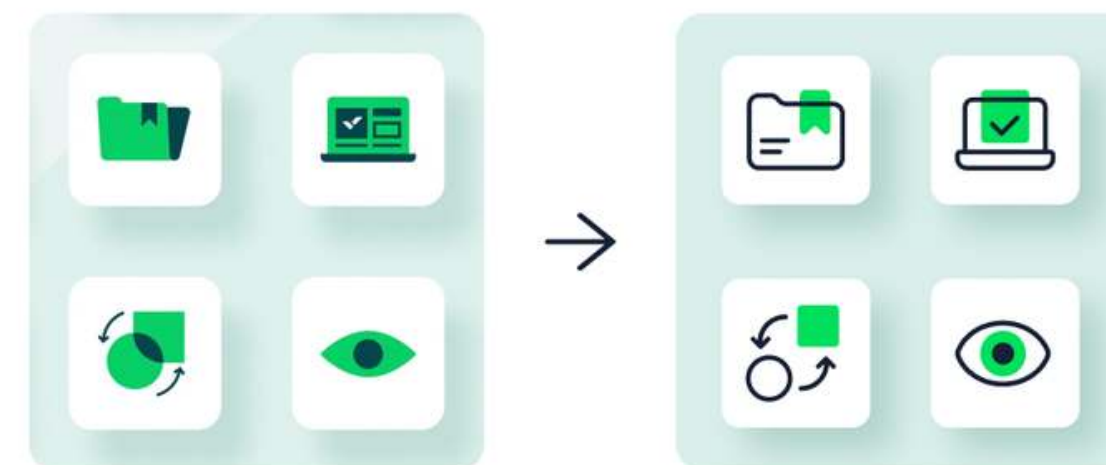

The old icons were not in line with the geometric, line-based visual language and design system. Replacing them meant instantly updating hundreds of existing pages with UIs built around their original visual weight.

DECISION

Build a system based on a set of rules and a geometric grid. Overall, simplify shapes where possible without sacrificing a wide range of interpretations, so that new icons do not need to be implemented from scratch.

OUTCOME

A cohesive, geometric icon system now implemented across 200+ landing pages and other digital and print assets, with guidelines that let future designers expand it accurately.

Green Areas

Complex icons

Replacing Part

This is majority of the icons, where adding extra shape would make the icon unnecessarily complicated/busy.

Simple Icons

Geometric Accents

Where icon is mostly one shape, add a green detail, ideally geometric. Avoid filling in the entire shape.

Zichovec is a small Czech craft brewery with a big, original personality: Recognisable in both look and taste.

PROBLEM

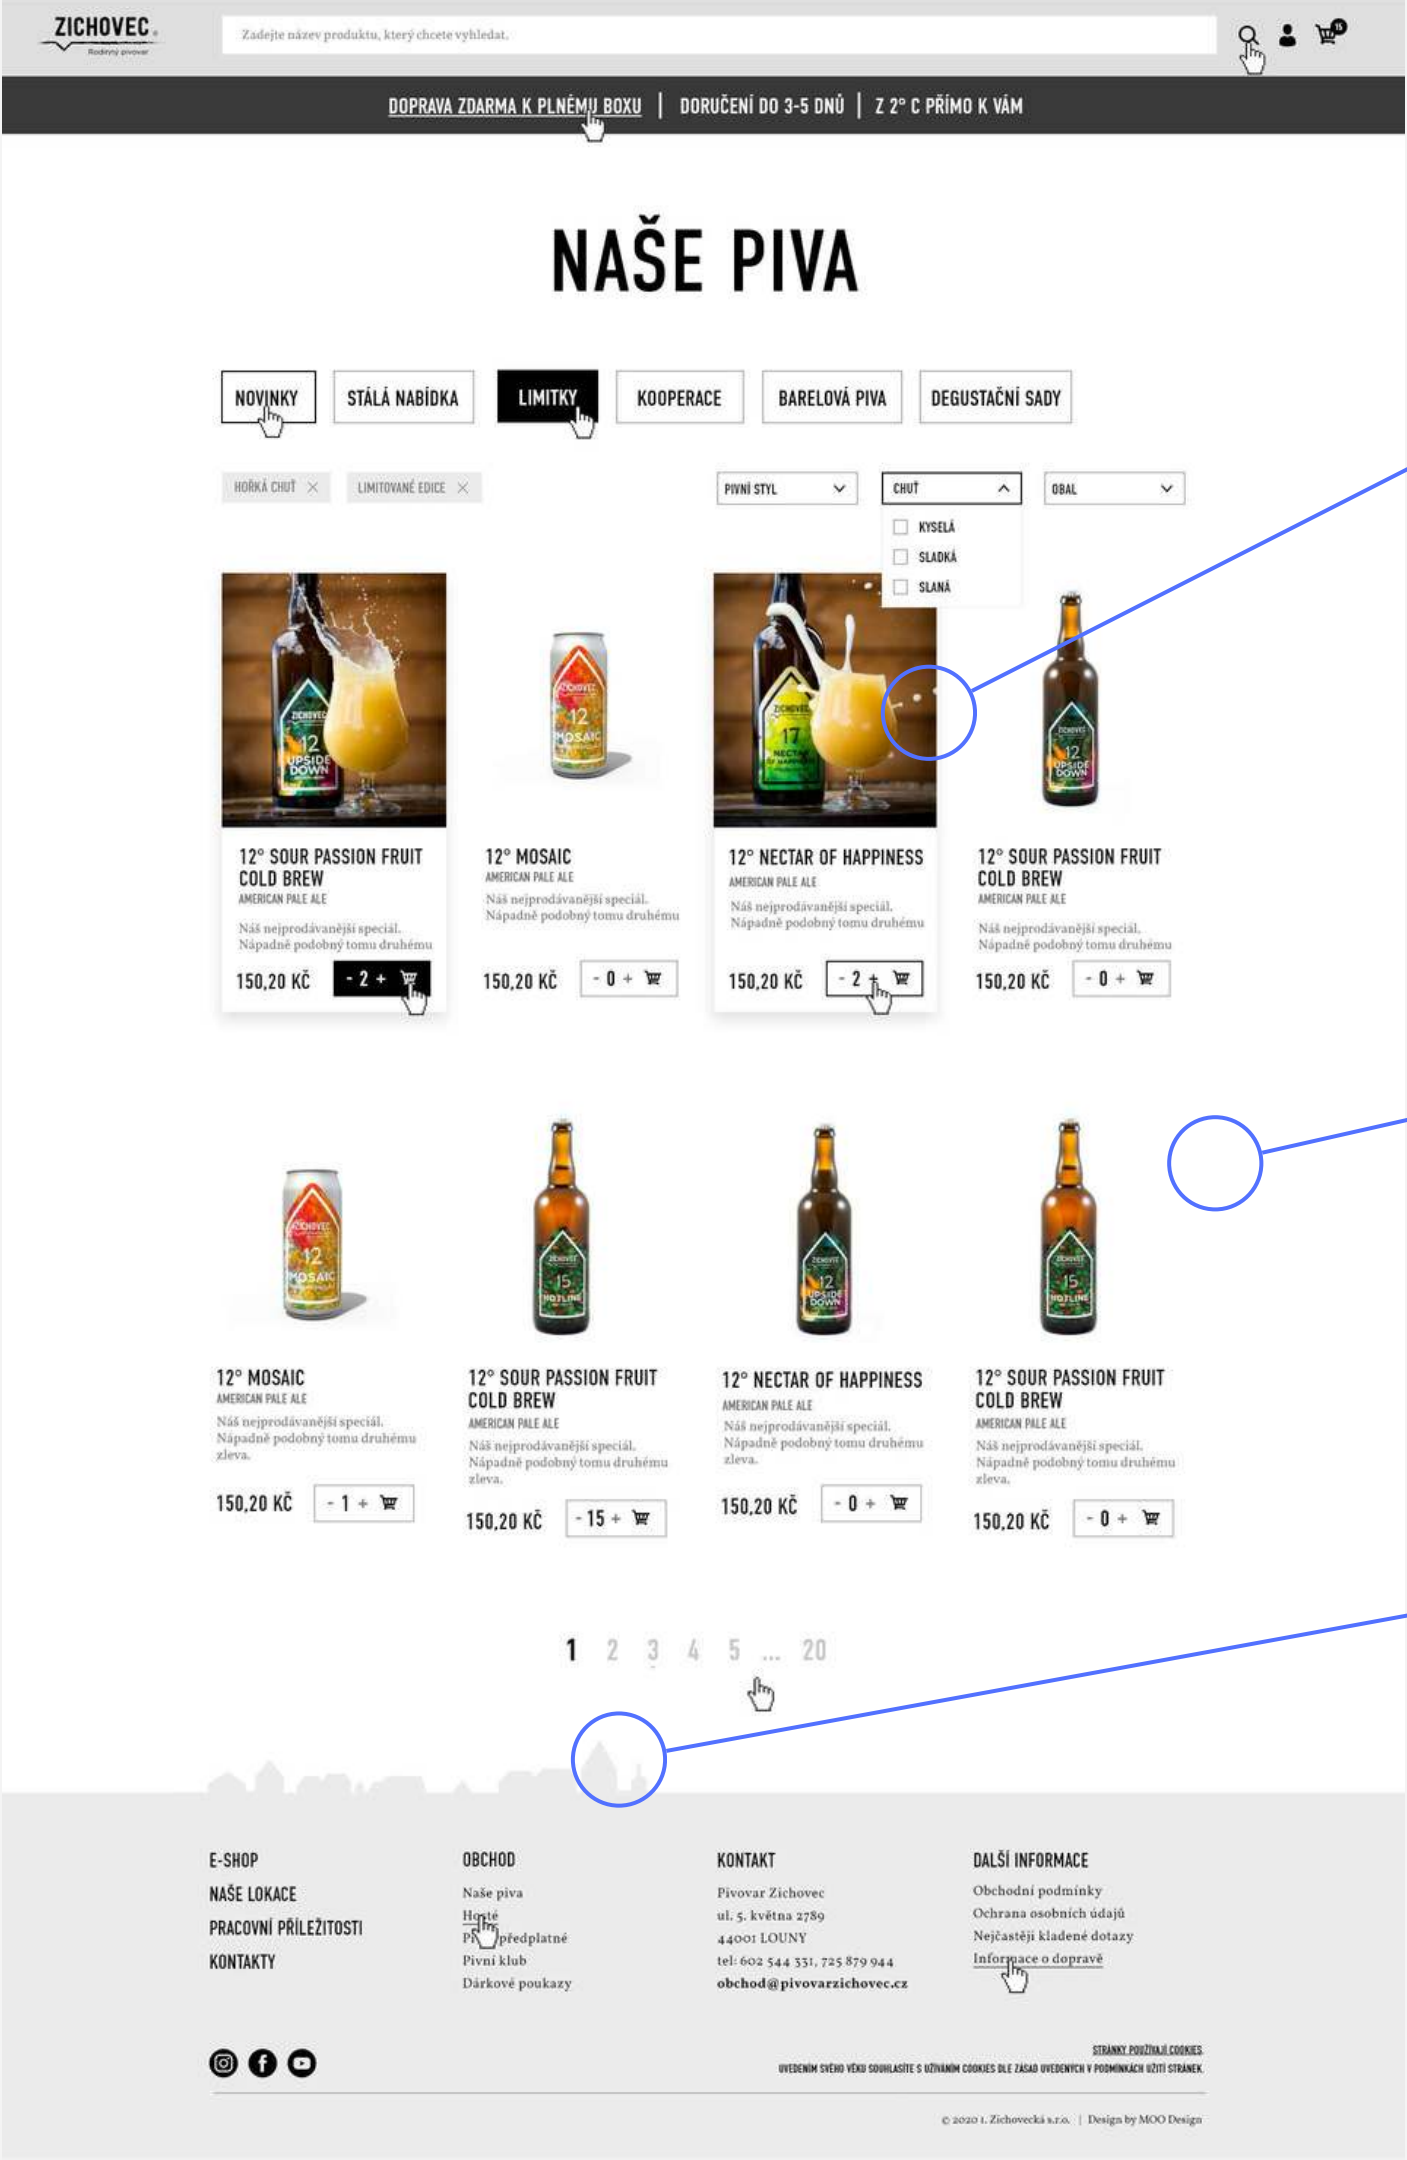

The previous templated Shoptet version had a very limited functionality and didn’t properly reflect the brand’s original identity.

DECISION

A clean, simple black-and-white canvas that lets the product photography shine. Shopping experience intentionally leaning towards a minimal layout, while homepage and other “sbout us” pages lean more artistic to showcase brewery’s unique personality and vibrat images.

OUTCOME

A bespoke website and ordering experience as recognisable as the brand itself, replacing the off-the-shelf setup with something built entirely around Zichovec.

Year in Review is a yearly Wrike campaign that shifts the focus from product and features to celebrating customers and their achievements.

PROBLEM

Due to lack of capacity, the campaign is built from a templated solution, therefore requires extra creativity to work with limited space in a way that feels festive but still on brand.

DECISION

A set of illustrations in our minimal lines-and-shapes language with small gradient shapes, reimagining brand elements in a more festive way and pulling UI elements straight from the product in neutral glass.

OUTCOME

A cohesive campaign with its own distinct language, while only using brand and product elements. Per-user stats landing page, an adapted email newsletter, and a set of shareable award badges.

Impactful Work Report

2024

Wrike's research report is an annually published digital document summarizing the findings of a large research project on the state of work management and productivity.

PROBLEM

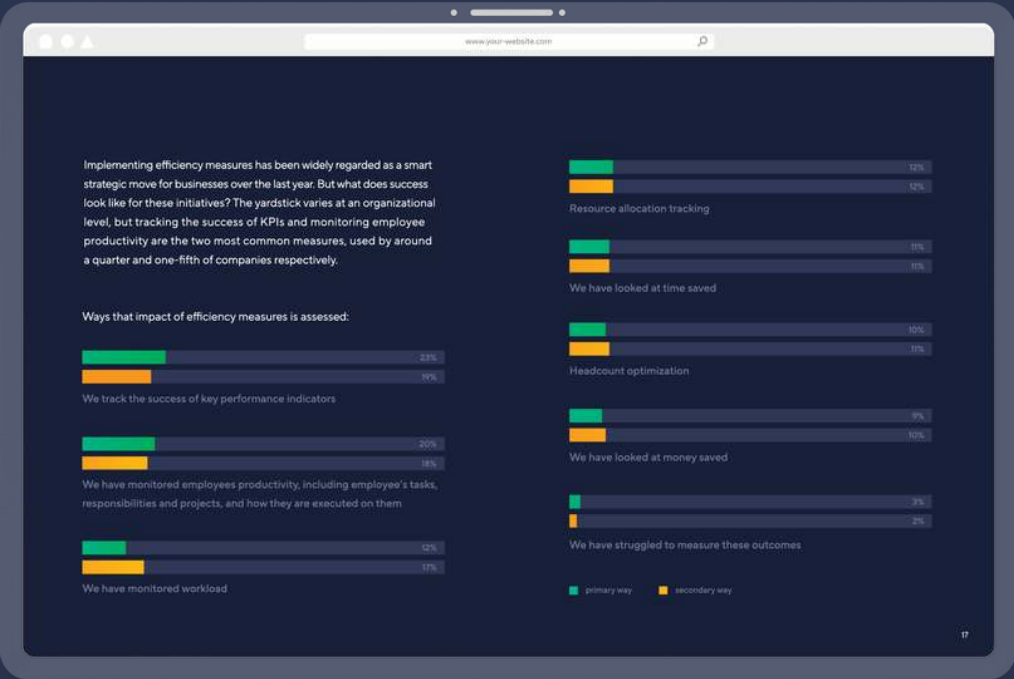

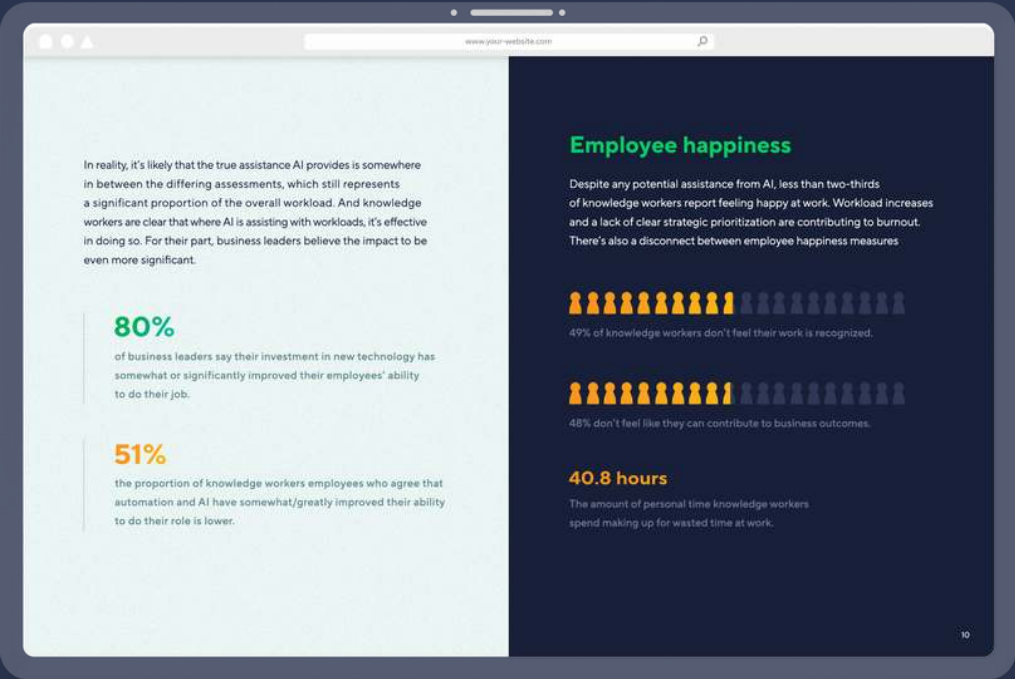

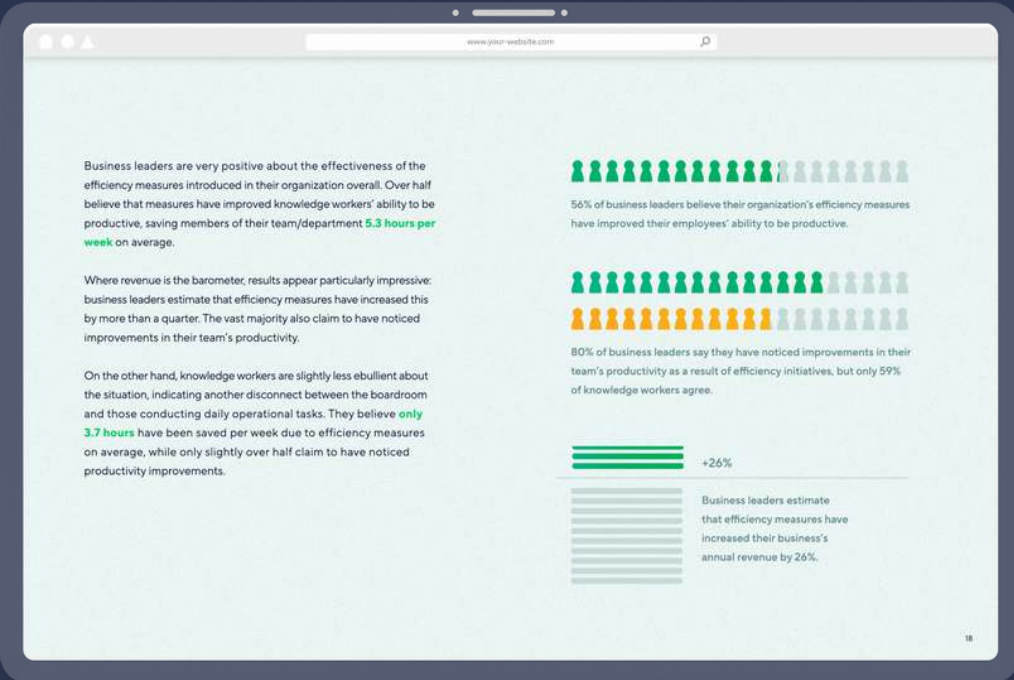

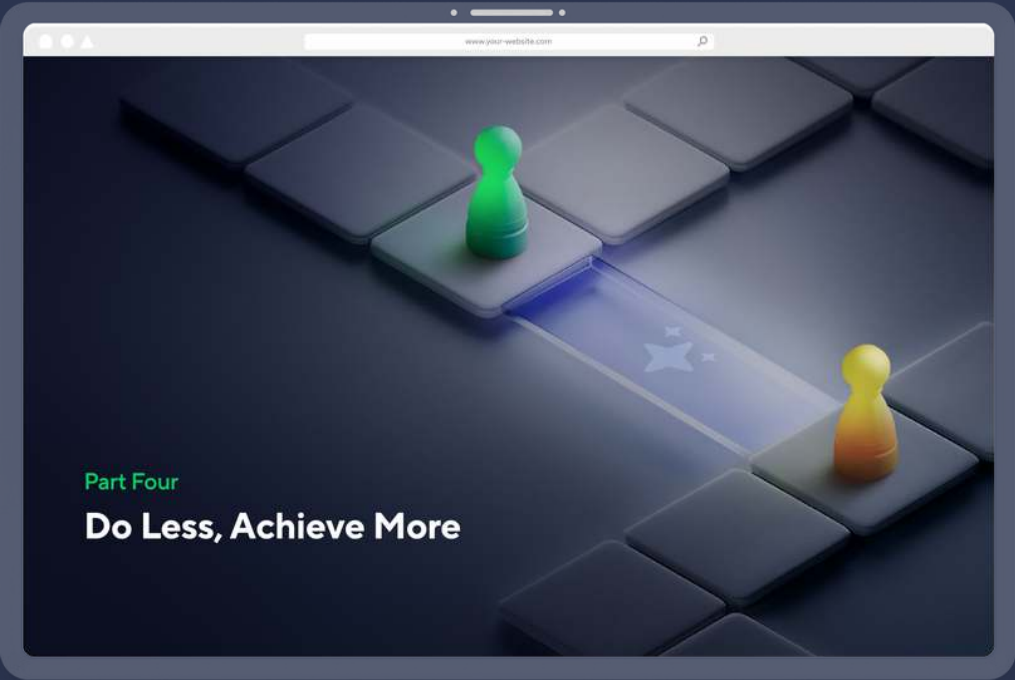

A dense long report can often feel dry and disconnected, with no thread tying the data together or making it genuinely engaging.

DECISION

Carry a board-game metaphor across the whole report, assigning "player" colours to key groups for quick and easy orientation. To achieve bespoke key illustrations, utilise AI image generation in combination with Photoshop.

OUTCOME

A cohesive, playful report where the metaphor runs through every illustration, graph, and diagram, built with one of my first AI-assisted illustration workflows.

Wrike AI-powered work management

Wrike AI embeds intelligent assistance into everyday work, enabling teams to create content, automate workflows, and surface real-time insights. That means reduced manual effort, accelerated execution, and better decision making – all in one secure, flexible platform.

Challenges

Enterprises often struggle with manual work, scattered tools, and limited visibility, leading to delays, rework, and employee burnout. Teams tend to waste time on repetitive tasks, content creation, and status updates instead of focusing on high-impact, strategic work.

Solutions

Wrike AI empowers teams with built-in intelligent assistance for content creation, workflow automation, and in-depth reporting. Automate routine work and reduce noise with natural language forms, AI-generated content and auto-summarization, an AI-powered whiteboard, and mobile inbox prioritization.

Wrike Copilot and AI insights deliver real-time answers, dashboards, and recommendations, while no-code AI agents act as autonomous workmates that update statuses, populate fields, route work, and monitor risks—unlocking faster execution, better decisions, and more time for meaningful work.

Results

- ✓ **Accelerate execution:** Save up to 11 hours per week per employee.
- ✓ **Improve decision making:** Use Copilot and AI insights to quickly surface trends, risks, workload information, and next-best actions.
- ✓ **Reduce manual work:** Eliminate hours of repetitive effort in intake, triage, data cleanup, and reporting with AI agents, forms, and automations.

Business process

1. Cold call

In this step, preparation is essential:

Selection of the correct business segment

+

Selection of the correct company

+

Finding the right contact person through LinkedIn or other sources

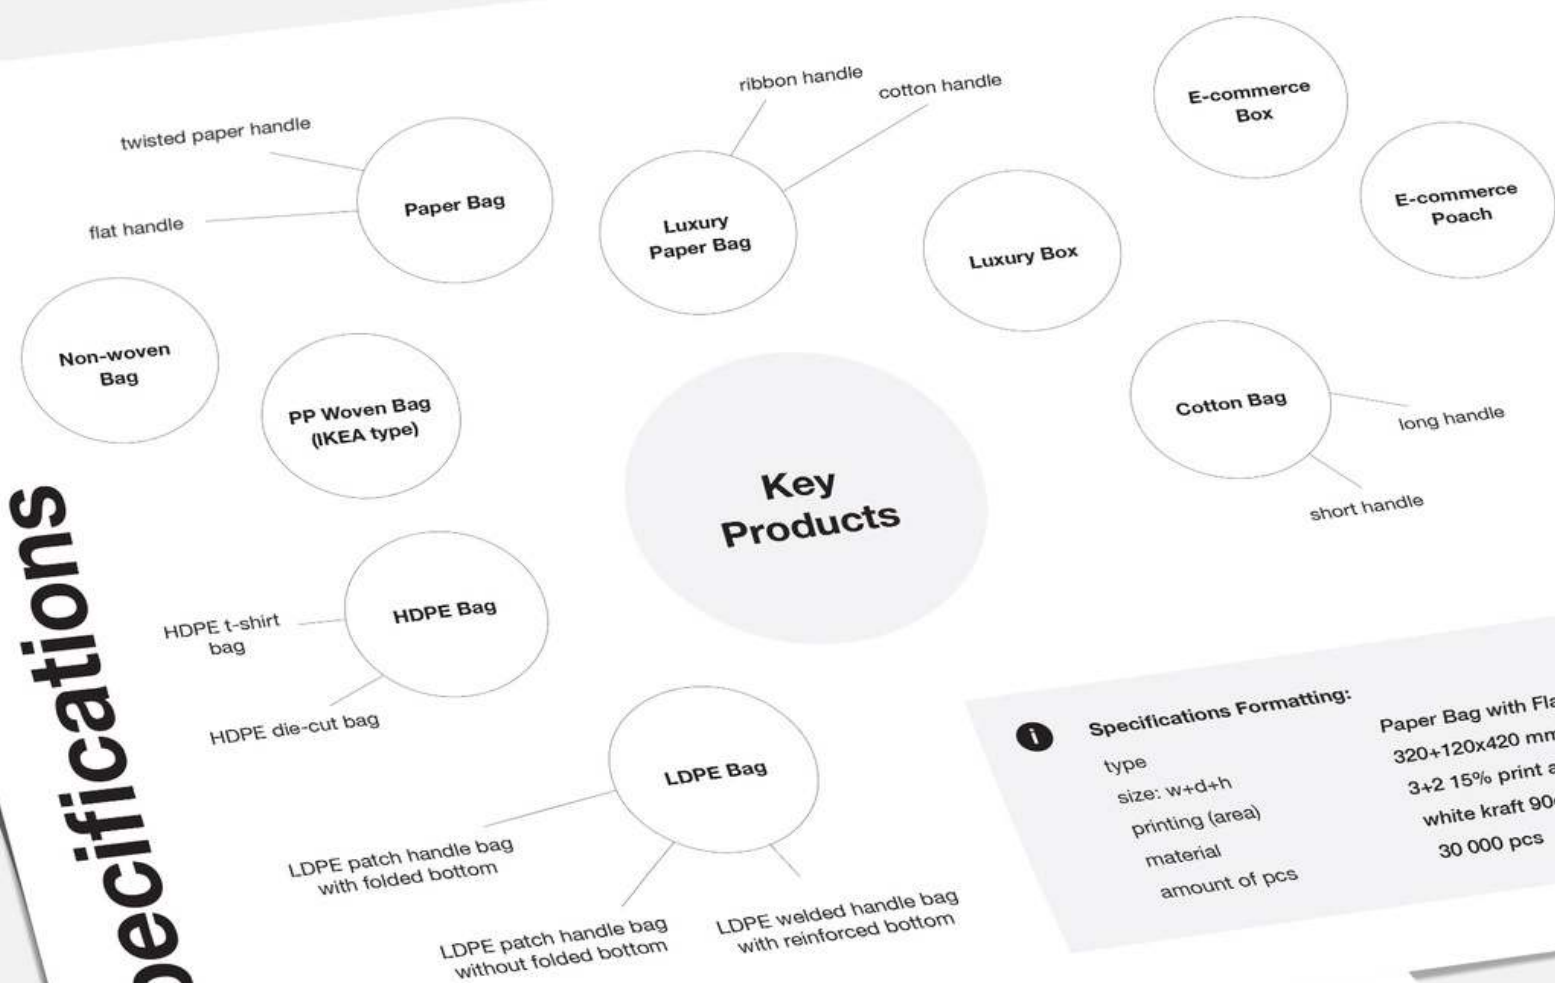

timeline

A short introduction of... clients. In general, we are trying to... i.e. "what do they use and how can we help them..."

1. Is there going to be a selection process or are they going to discuss these products in the near future? What is the contact information? (e-mail + phone number)
2. Suggestion of non-binding price offer which would aid in evaluating/comparing with their current supplier – we acquire specifications and a clear idea of this client's potential and their products
3. Short company introduction + showing our catalogue.
4. Sending samples – we are only selecting those products that we know the client is either using or is actively interested in.

- ! Provided we have the contact e-mail, after each call we send an invitation to the next one.
- x We should never send an e-mail with information without prior phone call with the client!

BOOK COVERS & REALISTIC PHOTO MONTAGE

In the next example, you can find a “behind the scenes” look at my work on realistic photo montage in Adobe Photoshop. While most of my graphic design work is informed by precision and geometry, at times I find that I am also leveraging my experience as a traditional painter. While this example showcases my work on book cover design, I find that carefully rendered realistic images or custom mockups can elevate any design project, especially in the day of custom image-generation.

Original illustration work for an already established design template.
